Caraval Stephanie Garber 2017-01-31 Welcome, welcome to Caraval—Stephanie Garber's sweeping tale of two sisters who escape their ruthless father when they enter the dangerous intrigue of a legendary game. Scarlett has never left the tiny island where she and her beloved sister, Tella, live with their powerful, and cruel, father. Now Scarlett's father has arranged a marriage for her, and Scarlett thinks her dreams of seeing Caraval, the far-away, once-a-year performance where the audience participates in the show, are over. But this year, Scarlett's long-dreamt of invitation finally arrives. With the help of a mysterious sailor, Tella whisks Scarlett away to the show. Only, as soon as they arrive, Tella is kidnapped by Caraval's mastermind organizer, Legend. It turns out that this season's Caraval revolves around Tella, and whoever finds her first is the winner. Scarlett has been told that everything that happens during Caraval is only an elaborate performance. But she nevertheless becomes enmeshed in a game of love, heartbreak, and magic with the other players in the game. And whether Caraval is real or not, she must find Tella before the five nights of the game are over, a dangerous domino effect of consequences is set off, and her sister disappears forever.

Setting the Table for Julia Child David Strauss 2011-02-28 The movement may have introduced affluent Americans to the pleasure of French cuisine years before Julia Child, but it was Julia's lessons that expanded the audience for gourmet dining and turned lovers of French cuisine into cooks.

Annually revised and updated, it offers full-color photos, maps, and illustrations, and information on local customs, currency, medical services, and transportation.

Uncertain Territories Inge E. Boer 2006 Tracing and theorizing the concept of boundaries through literary works, visual objects and cultural phenomena, this book argues against the reification of boundaries as fixed and empty non-spaces that divide the world. The contributors elaborate on Boer's theme of boundaries as spaces where opposition yields to negotiation. Their analyses span diverse artefacts and media, ranging from literature to photography, to art installation and presentation, film and song. Fanning out from Boer's central focus - Orientalism - to other places of contestation, boundaries are described to mediate the relationship between self and other.

Saigon at War Heather Stur 2020-06-30 During South Vietnam's brief life as a nation, it exhibited glimmers of democracy through citizen activism and a dynamic press. South Vietnamese activists, intellectuals, students, and professionals had multiple visions for Vietnam's future as an independent nation. Some were anticommunists, while others supported the National Liberation Front and Hanoi. In the midst of war, South Vietnam represented the hope and chaos of decolonization and nation building during the Cold War. U.S. Embassy officers, State Department observers, and military advisers sought to cultivate a base of support for the Saigon government among local intellectuals and youth, but government arrests and imprisonment of political dissidents, along with continued war, made it difficult for some South Vietnamese activists to trust the Saigon regime. Meanwhile, South Vietnamese diplomats, including anticommunist students and young people who defected from North Vietnam, travelled throughout the world in efforts to drum up international support for South Vietnam. Drawing largely on Vietnamese language sources, Heather Stur demonstrates that the conflict in Vietnam was really three wars: the political war in Saigon, the military war, and the war for international public opinion.

The Art and Archaeology of Venetian Ships and Boats Lillian Ray Martin 2001 Presents a brief history of Venetian art and then catalogues each known piece of Venetian art that depicts watercraft. Through detailed analysis of these images the author reveals important facts about the construction, rigging, and use of these watercraft.

Fundamentals of Aircraft and Rocket Propulsion Ahmed F. El-Sayed 2016-05-25 This book provides a comprehensive basics-to-advanced course in an aero-thermal science vital to the design of engines for either type of craft. The text classifies engines powering aircraft and single/multi-stage rockets, and derives performance parameters for both from basic aerodynamics and thermodynamics laws. Each type of engine is analyzed for optimum performance goals, and mission-appropriate engines selection is explained. Fundamentals of Aircraft and Rocket Propulsion provides information about and analyses of: thermodynamic cycles of shaft engines (piston, turboprop, turboshaft and propfan); jet engines (pulsejet, pulse detonation engine, ramjet, scramjet, turbojet and turbofan); chemical and non-chemical rocket engines; conceptual design of modular rocket engines (combustor, nozzle and turbopumps); and conceptual design of different modules of aero-engines in their design and off-design state. Aimed at graduate and final-year undergraduate students, this textbook provides a thorough grounding in the history and classification of both aircraft and rocket engines, important design features of all the engines detailed, and particular consideration of special aircraft such as unmanned aerial and short/vertical takeoff and landing aircraft. End-of-chapter exercises make this a valuable student resource, and the provision of a downloadable solutions manual will be of further benefit for course instructors.
