RMSEA, CFI, and TLI in structural equation modeling with

atory factor analysis, both suggesting that it is difficult to develop a set of cutoff values across all simulation conditions for DWLS. Nye and Drasgow (2011) found that DWLS produced smaller RMSEA S and larger CFI S and TLI S values than did the ML-fit indices using an empirical data set with 9,292 observations. Nye and Drasgow's simulation ...
