Survey Research in Corporate Finance H. Kent Baker 2011-01-19 As there is no current book that deals extensively or exclusively with survey research in corporate finance Survey Research in Corporate Finance is the only one of its kind. In the book, Baker, Singleton, and Velt do nothing less than provide an overview of survey methodology useful to financial researchers, synthesize the major streams or clusters of survey research in corporate finance, and offer a valuable resource and guide for those interested in conducting survey research in finance. Thus this volume will be an essential reference for practitioners, academics, and graduate students-who all must know the methodology of finance survey research. In addition to methodology, the book identifies areas that will be best served by survey-based research. Researchers will have a wealth of information regarding past surveys and will be aware of suitable candidates for future surveys. Several chapters are devoted to synthesizing survey results on major issues in finance. These will help decision makers in finance and in non-finance firms to acquire knowledge learned from years of communications between academics and practitioners.

The failure of most countries to grow and develop is often caused by the inability of potential investors to access capital for investment purposes. The Performance of Socially Responsible Investment Funds in Europe Eva Maria Kreibohm 2016-11-30 Socially responsible investing (SRI) is an investment approach that combines investors' financial as well as nonfinancial goals in the security selection process. Technically, investors can engage in SRI either by directly investing in companies that implement corporate social activities or by investing their money in SRI funds, which apply screening criteria to select securities. The screening process applied by the SRI funds has led to controversy among academics regarding whether the use of SRI screens in the security selection process influences the financial performance of the funds. The empirical study analyzes whether or not the screening process applied by such funds influences their financial performance. Previous research mostly has focused on analyzing the performance of SRI equity funds established in the United States. The study at hand not only includes SRI equity funds, but also SRI balanced and fixed income funds established in Europe, the biggest market for SRI globally. The study provides unexpected results that are not only of interest for investors, who want to get a better understanding of the effect on the financial performance of their portfolios in case SRI funds are added. The results are also relevant for SRI fund managers, who are interested in promoting their funds and attracting (new) investors, and for academics, whose research interests are e. g., located in the fields of SRI, fund portfolio performances and market efficiencies.
