Precalculus with Modeling & Visualization Gary K. Rockswold 2013-01-22 Normal 0 false false false By connecting applications, modeling, and visualization, Gary Rockswold motivates students to learn mathematics in the context of their experiences. In order to both learn and retain the material, students must see a connection between the concepts and their real lives. In this new edition, connections are taken to a new level with "See the Concept" features, where students make important connections through detailed visualizations that deepen understanding. Rockswold is also known for presenting the concept of a function as a unifying theme, with an emphasis on the rule of four (verbal, graphical, numerical, and symbolic representations). A flexible approach allows instructors to strike their own balance of skills, rule of four, applications, modeling, and technology.

Transformational Change Efforts: Student Engagement in Mathematics through an Institutional Network for Active Learning Wendy M. Smith

2021-05-05 The purpose of this handbook is to help launch institutional transformations in mathematics departments to improve student success.

We report findings from the Student Engagement in Mathematics through an Institutional Network for Active Learning (SEMINAL) study.

SEMINAL's purpose is to help change agents, those looking to (or currently attempting to) enact change within mathematics departments and beyond—trying to reform the instruction of their lower division mathematics courses in order to promote high achievement for all students.

SEMINAL specifically studies the change mechanisms that allow postsecondary institutions to incorporate and sustain active learning in

Precalculus to Calculus 2 learning environments. Out of the approximately 2.5 million students enrolled in collegiate mathematics courses each

year, over 90% are enrolled in Precalculus to Calculus 2 courses. Forty-four percent of mathematics departments think active learning

mathematics strategies are important for Precalculus to Calculus 2 courses, but only 15 percent state that they are very successful at

implementing them. Therefore, insights into the following research question will help with institutional transformations: What conditions,

strategies, interventions and actions at the departmental and classroom levels contribute to the initiation, implementation, and institutional

sustainability of active learning in the undergraduate calculus sequence (Precalculus to Calculus 2) across varied institutions?

In this text Bierce creatively uses both structure and content to explore the concept of time, from present to past, and reflecting its transitional and illusive qualities. The story is one of Bierce's most popular and acclaimed works, alongside "The Devil's Dictionary" (1911). Bierce (1842-c. 1914) was an American writer, journalist and Civil War veteran associated with the realism literary movement.
